On Malformations of the Human Heart: Illustrated Bu Numerous Cases, and Five Plates, Containing Fourteen Figures; And Precede by Some Observations on the Method of Improving the Diagnostic Part of Medicine In investigating diseases by anatomy, the author chiefly proposes to contribute to the diagnostic part of medicine. The study of symptoms, without regard to the organic changes which gave rise to them, leads to a confused knowledge of the genera, species, and varieties of internal diseases. The Clinical Physician, who has never compared the morbid appearances with the corresponding histories of cases, can only offer a conjecture respecting the seat, and the kind of disease, under which a patient suffers. Very commonly, in giving his opinion of the case, he will content himself with saying, that his patient labours under some disease of the liver - some disease of the heart - some disease of the brain, - c. This mode of expression is so familiar, that every medical man continually hears it, nay, often uses it. But if words be the signs of ideas, how loose and imperfect must be the conceptions of diseases, which, by the very expression, are thus rudely blended and confounded! What other than an empirical method of treatment can be founded on a diagnosis so purely conjectural! The evidence on which the practice of medicine rests, is probable, and the reasoning is analogical. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
