Excerpt: . . . 3. Results The primary purpose of this study was to document the general performance of the WRF model over one area and one timeframe. Since the forecasts from the 3 nested domains were all available, many of the results shown compare the errors between the 18-km, 6-km, and 2-km grid-space nests. The problem of seeing higher standard error measures associated with finer resolution grid spacing is well known (5). This problem is not expected to be as great for the basic parameters of temperature, dew-point temperature, wind speed, and wind direction presented here as it frequently is for small-scale phenomena, such as isolated rainfall. 3. 1 Surface Forecast Evaluations Mean and absolute error statistics were calculated based on all the surface observations available within each domain. In addition, to ensure comparisons between the various grid-spacing forecasts were based on the exact same observation quality and forecast difficulty, error statistics were calculated for the 18-km...
